

Digi Teachers Working Online Toolkit

Google Workspace

WHAT: Material making with all Google tools, assigning tasks in Classroom

WHY: The teacher can easily manage the group and the assignments, it is possible to differentiate the exercises for each student.

WHO: Suitable for students with plausible digital skills, but Classroom's functions are very logical and the platform guides to utilise its features. Can be used both in classroom and in distance teaching.

WHAT: It is possible to create different kind of exercises to support the learning and to give different exercises to each student. Classroom saves all the exercises, so it is easy to continue working with them later.

WHICH: Each student needs a computer – and some students want to use Classroom with their own mobile device.

HOW: Try classroom.google.com for free. Both you and your students need a Google account. You can also combine all the other Google tools to your Classroom courses.
