

Digi Teachers Working Online Toolkit

Kahoot in distance learning

WHAT: Validating that the things that have been talked about in Teams lessons are really learned.

WHY: Both students and teachers see if the teaching has been effective or not.

WHO: Suitable for students with basic digital skills. Kahoot is very easy to use for the ones that are using the games. Kahoot can be used both in classroom and in distance teaching.

WHAT: Kahoot makes it visual who has realised the things that has just been taught. In distant teaching this is even more important than in classroom teaching, because it is not possible to see what the students are doing.

WHICH: Each student needs a computer and a mobile device. They see questions from their computers, and they answer with their mobile devices. It is also possible, but not so practical, to use only a computer.

HOW: Kahoot is free for players and of a limited use also for Kahoot makers. If you want to use it a lot, then you have to pay.
