

Digi Teachers Working Online Toolkit

Visual Instructions

WHAT: Giving instructions with pictures and visual information, the example is an instruction of cleaning the toilet

WHY: It is easier for students to remember what to do next, when there is a picture of each step of a task. The pictures and the text complete each other.

WHO: The example is from the material for the students of cleaning services.

WHAT: Students can check from the visual instruction what to do next. Teachers can concentrate on guiding those students who need a lot of help, while some of the students get the guidance they need from the pictures.

WHICH: Camera, computer/mobile phone, the example was made with Word

HOW: There are several ways to create visual instructions. You can take the pictures yourself or use suitable pictures found online. You can build the instructions with several programs and print them, or you can share the instructions on a website, in a Whatsapp message or on a learning platform.

The example has been printed and attached to a toilet wall, so it is easy to follow the instructions while working. In the beginning the students clean only this toilet, and when the process is clear, they start working with other toilets.
